

PUBLIC HEALTH REPORTS

VOL. 40

DECEMBER 18, 1925

No. 51

THE NOTIFIABLE DISEASES

PREVALENCE DURING 1924 IN STATES

The tables which appear on the following pages have been compiled from data furnished by the health officers of the several States, the District of Columbia, and insular possessions. The data for syphilis and gonorrhea were furnished by the Division of Venereal Diseases of the Public Health Service.

The following is a list of the diseases included:

Anthrax.	Poliomyelitis.
Cerebrospinal meningitis.	Rabies in animals.
Chicken pox.	Rabies in man.
Dengue.	Rocky Mountain spotted fever.
Diphtheria.	Scarlet fever.
Gonorrhea.	Septic sore throat.
Influenza.	Smallpox.
Malaria.	Syphilis.
Measles.	Tuberculosis (all forms and pulmonary).
Mumps.	Typhoid fever.
Pellagra.	Typhus fever.
Pneumonia (all forms).	Whooping cough.

The following table shows the States (including the District of Columbia and insular possessions) for which morbidity and mortality data were received:

Morbidity	Mortality	Morbidity	Mortality
Alabama.....	Alabama.....	Nebraska.....	Nebraska.....
Arizona.....	Arizona.....	Nevada.....	Nevada.....
Arkansas.....	Arkansas.....	New Hampshire.....	New Hampshire. ¹
California.....	California.....	New Jersey.....	New Jersey.....
Colorado.....	Colorado.....	New Mexico.....	New Mexico.....
Connecticut.....	Connecticut.....	New York.....	New York.....
Delaware.....	Delaware.....	North Carolina.....	North Carolina.....
District of Columbia.....	District of Columbia.....	North Dakota.....	North Dakota.....
Florida.....	Florida.....	Ohio.....	Ohio.....
Georgia.....	Georgia.....	Oklahoma.....	Oklahoma.....
Idaho.....	Idaho.....	Oregon.....	Oregon.....
Illinois.....	Illinois.....	Pennsylvania.....	Pennsylvania.....
Indiana.....	Indiana.....	Rhode Island.....	
Iowa.....	Iowa.....	South Carolina.....	South Carolina.....
Kansas.....	Kansas.....	South Dakota.....	South Dakota.....
Kentucky.....	Kentucky.....	Tennessee.....	Tennessee.....
Louisiana.....	Louisiana.....	Texas.....	Texas.....
Maine.....	Maine.....	Vermont.....	Vermont.....
Maryland.....	Maryland.....	Virginia.....	Virginia.....
Massachusetts.....	Massachusetts.....	Washington.....	Washington.....
Michigan.....	Michigan.....	West Virginia.....	West Virginia.....
Minnesota.....	Minnesota.....	Wisconsin.....	Wisconsin.....
Mississippi.....	Mississippi. ¹	Wyoming.....	Wyoming.....
Missouri.....	Missouri.....	Hawaii Territory.....	Hawaii Territory.....
Montana.....	Montana.....	Porto Rico.....	Porto Rico.....

¹ Data not given by months.

For the purpose of comparison with States, the data for New York City are given in a separate table.

The populations given in the tables and used in computing case and death rates were estimated as of July 1, 1924, unless otherwise indicated.

For most of the diseases four tables are given: (1) Estimated expectancy, or average, (2) morbidity, (3) mortality, (4) rates.

The estimated expectancy, given in the tables for some of the diseases, is the result of an attempt to ascertain from the experience of recent years how many cases of the disease under consideration might be expected in 1924. In most instances the estimated expectancy is the median number of cases reported by the State for the years 1917 to 1923, inclusive. When several epidemics have occurred during these years, or when for other reasons the median is not satisfactory, epidemic years are excluded, and the estimated expectancy is the mean of the number of cases reported for the non-epidemic years. The aim has been to ascertain how many cases of each disease may reasonably be expected in the absence of epidemics.

The column headed "Number of years" shows the number of years for which data are available for each State.

In comparing the figures for 1924 with the estimated expectancy or with the average for preceding years, it should be borne in mind that there has been a gradual improvement in the reporting of communicable diseases during the last few years. An increase in the number of cases reported may be due to better reporting of the particular disease rather than to an increase in the number of cases existing.

A relatively large number of reported cases of a communicable disease, as indicated by a high case rate (and more especially when accompanied by a relatively small number of deaths, as indicated by a low fatality rate), usually means that the health department of that State is active and that the cases of the disease are being well reported by the practicing physicians. It does not necessarily mean that the disease is more prevalent in that State than in other States. A high fatality rate may mean that the disease was unusually virulent in a State, that the physicians did not treat the disease in that State with the success usual elsewhere, or that the practicing physicians did not report all of their cases. On the other hand, an unusually low fatality rate may be due to the fact that the disease in the State was unusually mild, that the physicians treated it with unusual success, that the practicing physicians reported their cases satisfactorily, or that the registration of deaths was incomplete, or the assignment of the causes of death inaccurate.

In some instances comparatively large numbers of cases of diseases reported in certain States may be due to the system of reporting

rather than to unusual prevalence of the diseases. For instance, in Mississippi, physicians report some diseases monthly to the State health officer, giving the number of cases occurring in their practice during the month. This method of reporting probably is responsible, in part, at least, for the comparatively large number of cases of certain diseases reported in Mississippi.

Tabulations of reported cases and deaths from communicable diseases, similar to the tables here presented, have been issued by the United States Public Health Service for the years 1912 to 1923, inclusive (reprints numbered 163, 208, 298, 345, 426, 505, 551, 643, 681, 791, 879, and 974).

Summary

CHICKEN POX

47 States: ¹		
Cases reported, 1924 (population 111,600,680)	202, 081	
Cases per 1,000 inhabitants, 1924	1. 81	
46 States: ¹		
Cases reported, 1924 (population 108,563,905)	197, 541	
Average, years 1922 and 1923	141, 897	
Cases per 1,000 inhabitants, 1924	1. 82	
Cases per 1,000 inhabitants, average	1. 33	
44 States: ¹		
Deaths registered, 1924 (population 103,540,196)	123	
Deaths per 1,000 inhabitants, 1924	0. 00	
Cases reported for each death registered, 1924	1, 604. 86	

DIPHTHERIA

47 States: ¹		
Cases reported, 1924 (population 111,600,680)	119, 831	
Estimated expectancy, based on years 1917-1923	141, 594	
Cases per 1,000 inhabitants, 1924	1. 07	
Cases per 1,000 inhabitants, estimated expectancy	1. 34	
46 States: ¹		
Deaths registered, 1924 (population 110,967,644)	9, 756	
Deaths per 1,000 inhabitants, 1924	0. 09	
Deaths per 100 cases, 1924	8. 19	

INFLUENZA

46 States: ¹		
Deaths registered, 1924 (population 110,967,644)	20, 147	
Deaths per 1,000 inhabitants, 1924	0. 18	

MEASLES

47 States: ¹		
Cases reported, 1924 (population 111,600,680)	511, 305	
Cases per 1,000 inhabitants, 1924	4. 58	
44 States: ¹		
Cases reported, 1924 (population 103,536,151)	488, 917	
Estimated expectancy, based on years 1917-1923	290, 923	
Cases per 1,000 inhabitants, 1924	4. 72	
Cases per 1,000 inhabitants, estimated expectancy	2. 96	

¹The District of Columbia is also included.

46 States:¹

Deaths registered, 1924 (population 110,967,644)-----	8, 370
Deaths per 1,000 inhabitants, 1924-----	0. 08
Deaths per 100 cases, 1924-----	1. 64

MUMPS

41 States:

Cases reported, 1924 (population 98,058,324)-----	125, 354
Cases per 1,000 inhabitants, 1924-----	1. 28

37 States:

Cases reported, 1924 (population 91,149,888)-----	124, 938
Average, years 1922 and 1923-----	49, 294
Cases per 1,000 inhabitants, 1924-----	1. 37
Cases per 1,000 inhabitants, average-----	0. 55

39 States:

Deaths registered, 1924 (population 93,512,052)-----	81
Deaths per 1,000 inhabitants, 1924-----	0. 00
Cases reported for each death registered, 1924-----	1, 528. 00

PELLAGRA

12 States:

Cases reported, 1924 (population, 37,860,436)-----	8, 860
--	--------

34 States:¹

Deaths registered, 1924 (population, 88,002,092)-----	2, 969
Deaths per 1,000 inhabitants, 1924-----	0. 03

PNEUMONIA

45 States:¹

Deaths registered, 1924 (population, 110,338,641)-----	108, 700
Deaths per 1,000 inhabitants, 1924-----	0. 99

POLIOMYELITIS

38 States:¹

Cases reported, 1924 (population, 91,462,119)-----	5, 199
Cases per 1,000 inhabitants, 1924-----	0. 057

36 States:¹

Cases reported, 1924 (population, 89,219,248)-----	5, 177
Estimated expectancy, based on years 1917-1923-----	2, 033
Cases per 1,000 inhabitants, 1924-----	0. 058
Cases per 1,000 inhabitants, estimated expectancy-----	0. 024

45 States:¹

Deaths registered, 1924 (population, 110,750,791)-----	1, 128
Deaths per 1,000 inhabitants, 1924-----	0. 010

SCARLET FEVER

47 States:¹

Cases reported, 1924 (population, 111,600,680)-----	184, 738
Estimated expectancy, based on years 1917-1923-----	136, 688
Cases per 1,000 inhabitants, 1924-----	1. 66
Cases per 1,000 inhabitants, estimated expectancy-----	1. 29

46 States:¹

Deaths registered, 1924 (population 110,967,644)-----	3, 109
Deaths per 1,000 inhabitants, 1924-----	0. 03
Deaths per 100 cases, 1924-----	1. 71

¹ Annual rate per 1,000 population.

² Deaths under 1 year per 1,000 births—an annual rate based on deaths under 1 year for the week and estimated births for 1924. Cities left blank are not in the registration area for births.

³ Data for 60 cities.

⁴ Deaths for week ended Friday, Dec. 4, 1925.

⁵ In the cities for which deaths are shown by color, the colored population in 1920 constituted the following per cents of the total population: Atlanta 31, Baltimore 15, Birmingham 39, Dallas 15, Fort Worth 14, Houston 25, Kansas City, Kans., 14, Louisville 17, Memphis 38, Nashville 30, New Orleans 26, Norfolk 38, Richmond 32, and Washington, D. C., 25.

Deaths from all causes in certain large cities of the United States during the week ended December 5, 1925, infant mortality, annual death rate, and comparison with corresponding week of 1924. (From the Weekly Health Index December 9, 1925, issued by the Bureau of the Census, Department of Commerce.)—Continued

PLAGUE-ERADICATIVE MEASURES IN THE UNITED STATES

The following items were taken from the reports of plague-eradivative measures from the cities named:

Los Angeles, Calif.

Week ended Nov. 28, 1925:

Number of rats trapped.....	1,841
Number of rats found to be plague infected.....	0
Number of squirrels examined.....	192
Number of squirrels found to be plague infected.....	0
Number of mice trapped.....	2,953
Number of mice found to be plague infected.....	0

Date of discovery of last plague-infected rodent Nov. 6, 1925.

Date of last human case, Jan. 15, 1925.

Oakland, Calif.

(Including other East Bay communities)

Week ended Nov. 28, 1925:

Number of rats trapped.....	558
Number of rats found to be plague infected.....	0

Totals:

Number of rats trapped Jan. 1 to Nov. 28, 1925.....	76, 555
Number of rats found to be plague infected.....	21
Number of squirrels examined May 1 to Aug. 1, 1925.....	7, 277
Number of squirrels found to be plague infected.....	0
Number of mice trapped Jan. 1 to Nov. 28, 1925.....	27, 800

Date of discovery of last plague-infected rat, Mar. 4, 1925.

Date of last human case, Sept. 10, 1919.

GENERAL CURRENT SUMMARY AND WEEKLY REPORTS FROM CITIES

Diphtheria.—For the week ended November 28, 1925, 37 States reported 1,660 cases of diphtheria. For the week ended November 29, 1924, the same States reported 1,978 cases of this disease. One hundred and two cities, situated in all parts of the country and having an aggregate population of about 29,000,000 reported 886 cases of diphtheria for the week ended November 28, 1925. Last year for the corresponding week they reported 965 cases. The estimated expectancy for these cities was 1,469 cases. The estimated expectancy is based on the experience of the last nine years, excluding epidemics.

Measles.—Thirty-four States reported 2,580 cases of measles for the week ended November 28, 1925, and 848 cases of this disease for the week ended November 29, 1924. One hundred and two cities reported 1,179 cases of measles for the week this year, and 325 cases last year.

Poliomyelitis.—The health officers of 38 States reported 38 cases of poliomyelitis for the week ended November 28, 1925. The same States reported 83 cases for the week ended November 29, 1924.

Scarlet fever.—Scarlet fever was reported for the week as follows: Thirty-seven States—this year, 2,837 cases; last year, 2,997 cases. One hundred and two cities—this year, 1,135 cases; last year, 1,279 cases; estimated expectancy, 939 cases.

Smallpox.—For the week ended November 28, 1925, 37 States reported 467 cases of smallpox. Last year for the corresponding week they reported 614 cases. One hundred and two cities reported smallpox for the week as follows: 1925, 89 cases; 1924, 213 cases; estimated expectancy, 42 cases. One death from smallpox was reported by these cities for the week—at Los Angeles, Calif.

Typhoid fever.—Four hundred and ninety-five cases of typhoid fever were reported for the week ended November 28, 1925, by 36 States. For the corresponding week of 1924, the same States reported 454 cases of this disease. One hundred and two cities reported 76 cases of typhoid fever for the week this year and 161 cases for the corresponding week last year. The estimated expectancy for these cities was 99 cases.

Influenza and pneumonia.—Deaths from influenza and pneumonia were reported for the week by 95 cities, with a population of more than 28,000,000, as follows: 1925, 754 deaths; 1924, 752.

City reports for week ended November 28, 1925

The "estimated expectancy" given for diphtheria, poliomyelitis, scarlet fever, smallpox, and typhoid fever is the result of an attempt to ascertain from previous occurrence how many cases of the disease under consideration may be expected to occur during a certain week in the absence of epidemics. It is based on reports to the Public Health Service during the past nine years. It is in most instances the median number of cases reported in the corresponding week of the preceding years. When the reports include several epidemics or when for other reasons the median is unsatisfactory, the epidemic periods are excluded and the estimated expectancy is the mean number of cases reported for the week during nonepidemic years.

If reports have not been received for the full nine years, data are used for as many years as possible, but no year earlier than 1915 is included. In obtaining the estimated expectancy, the figures are smoothed when necessary to avoid abrupt deviations from the usual trend. For some of the diseases given in the table the available data were not sufficient to make it practicable to compute the estimated expectancy.

¹ Typhus fever—1 case, St. Louis.

The following table gives the rates per 100,000 population for 103 cities for the 10-week period ended November 28, 1925. The population figures used in computing the rates were estimated as of July 1, 1923, as this is the latest date for which estimates are available. The 103 cities reporting cases had an estimated aggregate population of nearly 29,000,000, and the 96 cities reporting deaths had more than 28,000,000 population. The number of cities included in each group and the aggregate populations are shown in a separate table below:

Summary of weekly reports from cities, September 20 to November 28, 1925—Annual rates per 100,000 population¹

BRAZIL

Mortality—Prevailing diseases—State of Rio Grande do Sul—Year, 1924.—During the year 1924, 25,429 deaths from all causes were reported in the State of Rio Grande do Sul, as compared with 25,551 deaths reported for the year 1923. Estimated population, 3,023,000. The prevailing diseases present during the period were stated to have been tuberculosis, typhoid fever, and syphilis. It was stated that most of the typhoid fever deaths occurred in the rural sections of the State.

Porto Alegre (population, estimated, 241,903).—The total number of reported deaths for Porto Alegre during the year under report was 4,269, of which number 769 were from tuberculosis and 109 from typhoid fever. It was stated that most of the fatalities from typhoid fever occurred in sections of the city where the water supply was not generally available. The number of deaths of children under 2 years of age diminished from 1,503 in the year 1923 to 1,479 in 1924.

Vaccination against rabies.—The Pasteur Institute at Porto Alegre was stated to have administered treatment against hydrophobia to 1,137 persons, of whom all but 137 had been bitten by dogs.

Plague—Certain maritime States—October, 1925.—According to information dated November 7, 1925, plague was reported present in October, 1925, in the interior of the States of Alagoas, Bahia, Ceara, and Pernambuco.

CANADA

Communicable diseases—Ontario—September, 1925.—During the month of September, 1925, communicable diseases were reported in the Province of Ontario, Canada, as follows:

Disease	1925		1924	
	Cases	Deaths	Cases	Deaths
Cerebrospinal meningitis.....	4	1	7	7
Chicken pox.....	88	—	106	—
Diphtheria.....	271	16	183	6

Whooping cough.....	295	7	225	5

Smallpox was reported according to locality, during the period under report, as follows: Cases—Elora, 8; Fergus, 2; Kemptville, 2; Kitchener, 5; Nicholl, 4; Trenton, 4.

CHINA

North Manchuria Plague-Prevention Service—Report for year ended September, 1925.—Information received through the North Manchuria Plague-Prevention Service for the year ended September, 1925, shows the occurrence of plague during that period as follows:

North Manchuria.—Two cases of plague occurring in Russian tarabagan hunters were reported May 29, 1925, at Hahonteh, a small station between Hailar and Manchouli, on the Chinese Eastern Railway. One of the cases, which developed pneumonic complications, ended fatally.

North Shansi Province.—A rather serious epidemic was reported from Hsing-hsien District in North Shansi Province, about 35 miles from Paotehchow, where in 1917-18 an epidemic of pneumonic plague developed. Chinese medical officers sent to the locality reported 20 out of 27 villages to be affected, with a total of 790 deaths, practically all bubonic in type. The epidemic covered the month of October, 1924.

CUBA

Communicable diseases—Provinces—September and October, 1925.—Cases of disease were notified in the Provinces of Cuba for the months of September and October, 1925, as follows:

SEPTEMBER, 1925

Disease	Pinar del Rio	Habana	Matanzas	Santa Clara	Camagüey	Oriente	Total
Chicken pox.....		1	1			6	8
Diphtheria.....	2	16	3	4	1	10	36

EGYPT

Plague—Port Said—October 30–November 12, 1925.—During the period under report two cases of plague, both fatal, were reported in Egypt. The cases occurred at Port Said. The total number of cases reported in Egypt from January 1 to November 12, 1924, was 136, as compared with 359 cases reported during the corresponding period of the preceding year.

MALTA

Communicable diseases—October, 1925.—Communicable diseases were reported in the Island of Malta during the month of October, 1925, as follows:

Disease	Cases	Disease	Cases
Chicken pox.....	4	Scarlet fever.....	4
Diphtheria.....	14	Smallpox.....	38
Malta (undulant) fever.....	54	Tuberculosis.....	21
Measles.....	64	Typhoid fever.....	55
Pneumonia (including broncho-pneumonia).....	9		

Population, civil, estimated, 223,088.

Smallpox.—From October 1 to November 18, 1925, 50 cases of smallpox were reported in the Island of Malta. Of these, 14 cases occurred at Valetta and 21 cases at Floriana, a locality in the vicinity.

PORTUGUESE WEST AFRICA

Screening against mosquitoes—Lourenco Marques.—All buildings for dwelling purposes whether already occupied or to be constructed, are required by order of the municipal authority dated August 31, 1925, to be thoroughly protected against mosquitoes by screening doors and windows.

RUMANIA

Measures against importation of plague.—According to information dated October 31, 1925, inspection and control of arriving passengers and merchandise from Saloniki, Kavalla, and Mitylene, Greece, have been put in force at Rumanian ports to prevent importation of plague.

Epidemic scarlet and typhoid fever—Kishenev.—Under the same date, scarlet fever and typhoid fever were reported present in epidemic form at Kishenev, Bessarabia.

SALVADOR

Mortality — Gastroenteritis — Measles — Malaria — July–September, 1925.—During the three months ended September 30, 1925, 7,231 deaths from all causes were reported in the Republic of Salvador, Central America. Of this number, 155 each were reported for gastroenteritis and measles. Malarial fevers were stated to be prevalent. Population, 1,500,000.
